YEY Internship Program - CX Case Study

Yemeksepeti Customer Experience (CX) & Service Ops Team

Welcome to the Team!

Welcome to the Yemeksepeti CX team! We are thrilled to have you here for the YEY Internship evaluation process. At Yemeksepeti, we strive to provide a seamless experience for millions of users. However, when things don't go as planned, our Customer Experience and Service Ops teams step in to resolve issues quickly and efficiently.

To reduce operator workload and provide faster resolutions, we heavily utilize our **Self-Service** flows. We need your analytical skills to help us understand how this channel is currently performing and where we can improve.

Materials Provided

- **task1.pdf:** A glossary explaining key CX and Service Ops metrics (Contact Rate, Self-Service Rate, CSAT, NPS) and the definitions of the fields within the dataset.
- **task1-dataset.xlsx:** Raw data containing user orders, contact reasons, CSAT scores, and payment methods.

> **Your Manager:** Handan (CX Lead)
> **Your Role:** CX Data Analyst Intern
> **Objective:** Extract actionable insights regarding the Self-Service support channel.

Your Mission

The Assignment

Handan has asked you to dive into the provided dataset and evaluate the performance of our Self-Service channel. Please prepare an email report addressed to Handan covering the following points:

- **Data Analysis & Visualization:** Using Python, Excel, or any tool of your choice, analyze the dataset. We want to see your data visualization skills. Please include at least two graphs in your report.
- **CSAT Comparison:** Calculate and compare the Customer Satisfaction (CSAT) scores between the *Self-Service* channel and the live *Contact* channel. Are self-service users happier?
- **Pain Points:** Identify the most frequent complaint types (drivers of dissatisfaction) for users who used the Self-Service channel. What is going wrong with their orders?
- **Actionable Recommendations:** Based on your data findings, provide brief, concrete recommendations on how we can improve the Self-Service customer experience.
