YEY Internship Program - CX Case Study

Task 2: Process & Flow Improvement

Background

Now that you've analyzed the data in Task 1, let's look at the actual user journey. Please review the **task2-sampleflow.pdf** document.

Scenario: A customer's order is delayed.

The user opens the Help Center and sees 3 options. The app routes them based on their choice:

🔴
Order cancellation

➔ Routes to a
Live Operator

🟡
Change in order

➔ Routes to
Self-Service

🟡
Problem with order

➔ Routes to
Self-Service

** At the end of both paths, the user fills out a CSAT (Customer Satisfaction) survey.*

Your Mission

We need your ideas to optimize this journey. Continue your email to Handan by answering these two questions:

1. Why is there a CSAT difference?

Users are trying to solve the *same* delay issue, but satisfaction varies between the two channels. Why do you think users rate the Live Operator experience differently than the Self-Service experience?

2. How would you improve the flow?
